DETAILED ACTION

Page 2

STATUS OF CLAIMS

New claims 29 to 48 are pending prosecution in this Office action.

Claims 1-28 were originally been filed (11/06/98). Upon filing of CPA claims 1-28 were canceled and claims 29-84 were added (12/13/99, paper no. 13).

Claims 29-84 were restricted to three Groups of Inventions (10/12/00, paper no. 16).

Applicant elected Group II invention, claims 29-48, drawn to a composition comprising;

a) a biologically active IGF-I or analogue thereof and b) a solubilizing compound comprising a guanadinuum group, without traverse (11/13/00).

In response to the Species Election, applicant elected "arginine as the species of guanidinium-group containing compound" paper no. 17, received 13 November 2000.

Claims 49-84, drawn to non-elected Inventions are withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected inventions, there being no allowable generic or linking claim. Election was made without traverse in Paper No. 17, received 13 November 2000.

The restriction requirement is made **FINAL**.

The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.

REJECTION - 35 USC 103 (a)

Claims 29-48 are rejected under 35 U.S.C. 103(a) as being unpatentable over Chang et al.

Page 3

Chang et al teach that; the solubility of the isolated insoluble IGF-I is increased using a

single buffer containing a chaotropic agent. See, the paragraph bridging column 26-27.

Moreover, at column 10, the typical pH range for the buffer and the chaotropic agents suitable

for increasing the solubility of and IGF-I or an analogue thereof in solution are also taught.

Hence, the reference clearly shows that the use of guanidinium-containing compounds enhance

the solubility of IGF-I at higher pH (pH of typically at least 7.5), thereby providing for a stable

IGF-I composition having higher concentrations. See the entire document.

It would have been obvious to an ordinary art skilled at the time the invention was made

to use the conditions cited by the reference for obtaining a composition of IGF-I or analogues

thereof with higher concentration of the active agent(s) therein - as claimed. To choose a

particular concentration range (mg/ml) is well within the skill of an ordinary art skilled and greatly

depends on the use for the resulting composition.

Any inquiry concerning this communication should be directed to F.T. Moezie at

telephone number (703) 305-4508.
